

**CLAIMS**

1. - Laminated board (11) for exterior cladding comprising a core (13) of kraft paper impregnated with phenolic resin, at least one layer of natural wood (14) and at least one surface covering layer (15) which includes a coating film (17) and a substrate film (16), characterized in that:
  - a) the coating film (17) is a film with at least one layer of polymethylmethacrylate (PMMA) either pure or modified through the addition of other polymers,
  - b) the substrate film (16) is a paper impregnated with a compound formed from a phenolic resin in a proportion of between 95 and 80% by weight and a polymer promoting adhesion of the said coating film (17) in a proportion of between 5 and 20% by weight.
2. - Laminated board (11) according to claim 1, characterized in that the adhesion-promoting polymer is an acrylic polymer.
3. - Laminated board (11) according to claim 1, characterized in that the adhesion-promoting polymer is a melamine polymer.
4. - Laminated board (11) according to claim 1, characterized in that the adhesion-promoting polymer is a urea polymer.
5. - Laminated board (11) according to claim 1, characterized in that the adhesion-promoting polymer is a combination of an acrylic polymer and/or a melamine polymer and/or a urea polymer.
6. - Laminated board (11) according to any one of claims 1 to 5, characterized in that the coating film (17) is a single-layer film based on polymethyl methacrylate (PMMA) modified with polyvinylidene fluoride (PVDF).
7. - Laminated board (11) according to any one of claims 1 to 5, characterized in that the coating film (17) is a two-layer film with an upper layer based on polyvinylidene fluoride (PVDF).
